

### European Hotel Distribution Study: The Rise of Online Intermediaries

### **Special Focus Switzerland**

July 4, 2014

Prof. Roland Schegg Institute of Tourism, HES-SO Valais (Sierre, Switzerland) roland.schegg@hevs.ch

## **Executive Summary (I)**

Institute of Tourism

Page 2

- Online distribution has become an important channel for the European hotel industry. On average, we estimate that in 2013 already more than one out of five overnights was generated by Online Booking Agencies (OTA), mainly through Priceline (booking.com, Agoda), Expedia (incl. hotels.com, Venere) and HRS (incl. hotel.de, Tiscover) which together account for nearly 90% of this market.
  - In Switzerland, the market share of OTAs (in terms of overnights) is 19.4% with Priceline dominating (relative market share of 70.1%) followed by Expedia (9.9%) and HRS (9.8%).
- Overall online intermediaries (OTA, GDS and others) generate
  25% of overnights in Europe according to our estimation.
  - In Switzerland, these actors account for 22.5% of the generated overnights.

## **Executive Summary (II)**

- Whereas more than 5 out of 10 overnights are realized by direct bookings between guests and hotels, traditional intermediaries (e.g. travel agency, tour operator) generate 16.5% of overnights in Europe. However, tourism organizations play only a minor role in hotel distribution with 1.35% of overnights.
  - In Switzerland, direct bookings are stronger than in Europe with nearly two thirds (63.7%) of overnights coming through these channels. Tourism organisations (local to national) account for 2.5% of overnights.

### **Executive Summary (III)**

Institute of Tourism

Page 4

- The European hotel market is characterized by an important proportion of small and medium-sized hotel (SME) enterprises, mainly in the budget to mid-class segment.
  - Survey results suggest that the smaller the hotel property the higher the OTA share. In Switzerland, the highest OTA market shares (22.5%) can be observed for hotels with 20-50 rooms, whereas hotels with more than 100 rooms have OTA shares of less than 12%.
  - As expected hotels with 1-3 stars have significant higher OTA shares compared to luxury hotels (4-5 stars). In Switzerland, the 2\* hotels have OTA market share of 22% and 3\* hotels of 20.3% whereas 4\* hotels have an OTA share of 17.8% and 5\* hotels of 10.8%.

### **Executive Summary (IV)**

- The majority (51%) of European hotels in the survey manage rates and availability in a manual way. The use of channel managers and hotel software is clearly higher in 4-5\* hotels than in other types of hotels.
  - In Switzerland, the proportion of hotels managing manual channels in a manual way is lower (44.1%) when compared to the overall European results. The use of a channel manager is observed in 44% of properties compared to 36% on a European level.

## **Executive Summary (V)**

- Having an own website (94%) and providing free Wi-fi for guests (74%) are the most popular ICT features used by the surveyed European hotels. A Facebook page is used by 71% of the hotels whereas an Internet Booking Engine (IBE) on the own hotel website is present in 59% of the properties.
  - In Switzerland, observed trends in the use of ICT are similar to those in European hotels. Free Internet access is a bit higher (80.6%) and Facebook use a bit lower (62.7%) compared with European hotels.

## **Executive Summary (VI)**

- Only one out of two hotels is using mobile booking channels.
  The proportion of hotels without a mobile distribution strategy is much higher in the 1-3\* hotels than in the 4-5\* segment.
  - In Switzerland, 48% of hotels have no mobile distribution options. Whereas 31% of Swiss respondents have a mobile version of the website, only 8% have an own mobile app.

## **Executive Summary (VII)**

- On the European level, half of the hotels (46%) do not know the integration options with travel meta-search engines whereas one out of five knows it but does not see the business case. The number of hotels not knowing metasearch integration is clearly above 50% for 1-3\* hotels whereas with 4\* (39%) and 5\* properties (24%) this proportion is much smaller.
  - In Switzerland, the situation is similar. 45% of hotels do not know interface options with the meta-search engines and only 30% have a permanent connection with the popular players in this field (i.e. mainly TripAdvisor and Trivago).

## **Executive Summary (V)**

Institute of Tourism

Page 9

- These are some of the results of a joint survey conducted between January and April 2014 by 26 European hotel associations coordinated by HOTREC, the umbrella association of Hotels, Restaurants and Cafés in Europe, in collaboration with the Institute of Tourism (ITO) of the University of Applied Sciences and Arts Western Switzerland Valais (HES-SO Valais) in Sierre.
- Results are based on responses from 2'298 individual hotels and complementary data from 5 hotel chains in Germany comprising nearly 600 hotels.
- In **Switzerland**, the survey is based on the results of 279 responses.

Haute Ecole de Gestion & Tourisme Hochschule für Wirtschaft & Tourismus

#### The survey

 $\Sigma \pi \approx 8$  Institute of Tourism Page 10

### The survey: background

- In order to draw a more precise picture of the current situation of distribution (online as well as offline) within the European hotel industry, especially in relation to the role of online travel agencies (OTA), HOTREC, the umbrella association of Hotels, Restaurants and Cafés in Europe, has decided to conduct an online survey together with hotel associations from 26 countries across Europe for the reference year 2013.
- In Switzerland, hotelleriesuisse and Gastrosuisse have supported the study.

### The questionnaire

- Hes. Haute Ecole de Gestion & Tourisme Hochschule für Wirtschaft & Tourismus The online questionnaire asked for market shares of different direct and indirect distribution channels (in terms of
- overnights) as well as the specific market shares of the OTAs (such as Booking.com, Expedia, and HRS).
- Switzerland: The previous editions of the survey since 2002 asked for booking shares. This change in methodology has to be taken into account when comparing results with previous surveys.
- Further questions queried how hoteliers manage online distribution channels and how they use information and communication technologies (ICT).
- The final part comprises questions covering characteristics of the hotel property (star rating, the size of the hotel in terms of rooms offered, amount of overnight stays, its location, main target group, etc.)

### The survey administration

- The questionnaire was translated in 19 languages with the help of the respective national hotel organizations.
- The links to the different language versions of the online questionnaire were published on an isolated web page (not accessible by the normal website visitor) on the website of HOTREC (www.hotrec.eu).
- The survey was addressed to the member hotels of the different hotel associations and conducted between February and April 2014. The collected data cover the reference year 2013.
- The different hotel associations contacted their members either by email or through newsletters. Some associations published a link on their own website. For these cases a specific "public" link has been created.

# Methodological remarks: sampling

Institute of Tourism

Page 14

- **Sample size**: Response rates by country vary strongly in the survey which totals 2298 overall responses:
  - Generally, results based on less than 30 observations are not reliable.
  - Depending on the size of the hotel population in a country and sampling distribution, results based on less than 100 observations have still to be interpreted with some caution.
- In Germany, in addition to the responses of 597 individual hotels from the survey, aggregated data of 5 hotel chains totaling 596 hotels could be integrated into the survey data set for some of the questions. This results in a total of 1193 participating hotels for this country.
- In **Switzerland**, the survey is based on the results of 279 responses.
- As not all hotels have answered all the questions, the **indicated total number of observations changes from one question to another**.

# Methodological remarks: confidence intervals

- Measure of accuracy
  - A confidence interval gives an estimated range of values which is likely to include an unknown population parameter, the estimated range being calculated from a given set of sample data. (Definition from Valerie J. Easton and John H. McColl's Statistics Glossary v1.1). -> A confidence interval tell you the most likely range of the unknown population average.
  - We used the **bootstrap** approach with a **95% confidence interval**: This gives the **probability** that the interval produced by the bootstrap method includes the true value of the parameter in the population.

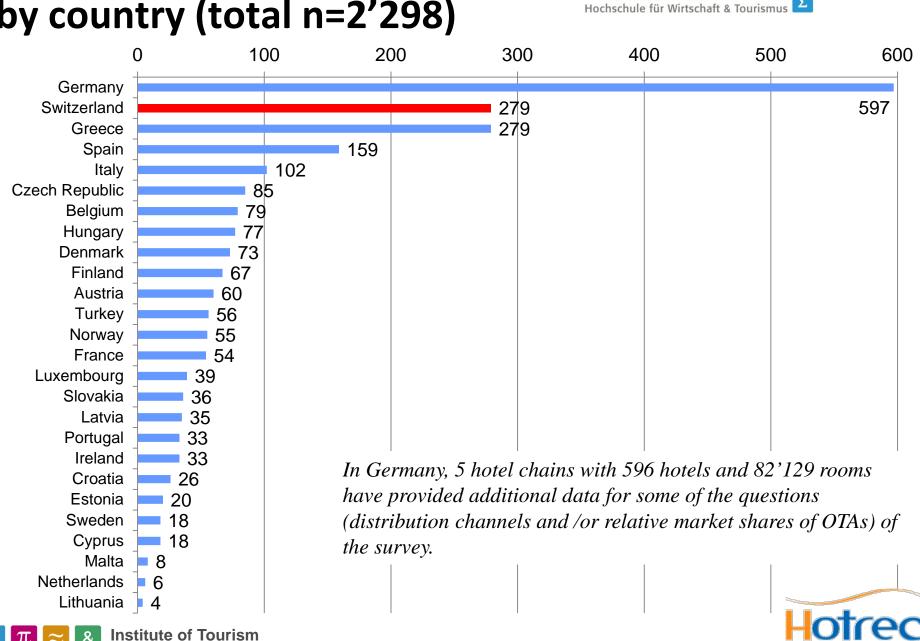

#### Methodological remarks: weighted averages

- Estimations of market shares on an European level are based on a weighted average values:
  - In order to estimate market shares of distribution channels and OTAs on an European level, country-specific data serve as input.
  - Given the varying size of hotel markets in the HOTREC member countries, we estimate a weighted average value for market share estimations on an European level. This approach means that the overall European estimate is **not biased** by a high number of observations in specific countries.
  - ✓ A weighted average is the summation of variables (country-specific averages), each of which are multiplied by their relative weight.
  - ✓ The relative weights in our case are the respective **overnights** for each country in the sample.
  - ✓ For countries with insufficient number of observations and hence limited validity of country-specific estimates, the overall weighted mean from countries with more robust data is used.

#### Number of survey responses by country (total n=2'298)

# Summary of sample characteristics (Europe)

Institute of Tourism

Page 19

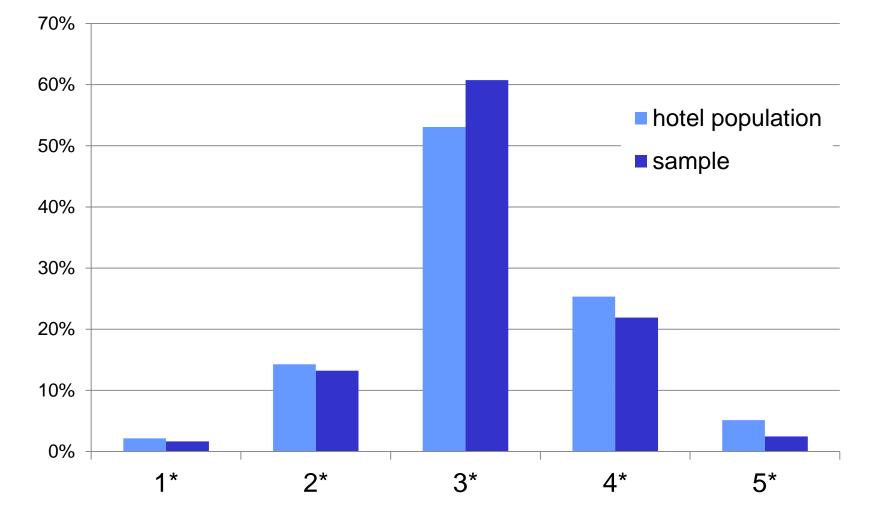

- Overall, the following main observations can be made with regard to the sample characteristics:
  - Hotel Classification 3 and 4 star hotels make up 60% of the classified hotels (76% of the whole sample).
  - Size The average size of the hotels in the sample is 37 rooms (median value), yet one hotel of five has between 10 and 19 rooms and 40% have less than 30 rooms.
  - Overnights nearly 40% of the hotels generated between 2'000 and 10'000 overnights during 2013. Based on precise data from every second hotel a median value of 10'700 overnights can be determined.
  - Customer segment The leisure segment is the dominant target group for 52% of hotels, followed by business clients for 36% of properties
  - Location 42% of hotels are in towns with less than 10'000 inhabitants
  - Management 70% of hotels are individual properties whereas 16% belong to a hotel chain and 11% to a hotel cooperation.

#### 51. How do you maintain your rates and availabilities on the online booking channels?

93.9% Response rate:

### Channel management: summary of overall results

Institute of Tourism

Page 46

- The majority of hotels in the survey manage rates and availability in a manual way.
- The use of channel managers and hotel software is clearly higher in 4-5\* hotels than in other types of hotels.
- Size matters: roughly 50% of hotels with more than 50 rooms use channel managers and/or PMS-CRS systems.
- Hotels in bigger cities (over 50'000 inhabitants) make a more intense use of channels managers (40-60% of hotels) and PMS-CRS systems (nearly 30%) than hotels in smaller cities.
- As expected, chain hotels or hotels in cooperation use channel managers (50% of properties) and PMS-CRS systems (30-40%) significantly more often than independent hotels (31% resp. 14%).

#### Based on unweighted (raw) sample data.

Institute of Tourism Page 50 "ICT use index" = is the sum of the individual ICT features for a hotel (max value=12)

## Use of ICT: summary of overall results

- Having an own website (94%) and providing free Wi-fi for guests (74) are the most popular ICT features used by the surveyed hotels
- A Facebook page is used by 71% of the hotels whereas an Internet Booking Engine (IBE) on the own hotel website is present in 59% of the properties.
- **Classification**: As expected higher ranked hotels make significantly higher use on nearly all ICT features.
- *Size of hotels*: Hotels with more than 50 rooms show "ICT use index" of above 5.0 whereas small hotels (<20 rooms) have values below 4.0.
- Management type: Independent hotels have a significantly lower use of ICT that chain hotel or hotels in cooperations; the ICT use index is 4.3 for the former and over 5.3 for the latter.

## Use of ICT: summary of results for Switzerland

- Having an own website (94%) and providing free Wi-fi for guests (81%) are the most popular ICT features observed in the surveyed hotels.
- A Facebook page is used by 63% of the hotels (significantly lower than in European hotel sample) whereas an Internet Booking Engine (IBE) on the own hotel website is present in 62% of the properties.
- The use of a modern PMS is clearly higher (47%) in Swiss hotels than in European hotels (37%).

### ICT use index for Switzerland

 Swiss hotels have an ICT use index (4.78) which is situated in the mid-range compared to other European countries. The table below shows that use of ICT is associated with the star classification.

|                | ICT use index |               |        |  |
|----------------|---------------|---------------|--------|--|
|                | Mean          | Std deviation | Median |  |
| Non response   | 5.25          | 1.29          | 5.50   |  |
| 1*             | 2.75          | 2.06          | 2.50   |  |
| 2*             | 4.00          | 1.84          | 3.50   |  |
| 3*             | 4.54          | 2.01          | 5.00   |  |
| 4*             | 6.06          | 1.81          | 6.00   |  |
| 5*             | 5.33          | 2.16          | 5.00   |  |
| other category | 4.52          | 2.13          | 5.00   |  |

|---|-----|-------|
| Non response  | 22  | 7.9%  |
| Yes, via an own app (hotel, chain or cooperation)                     | 22  | 7.9%  |
| Yes, via a mobile version of the hotel website                        | 85  | 30.5% |
| Yes, via 'Same Day Booking Apps' (e.g. JustBook, Hotels Tonight, etc) | 17  | 6.1%  |
| No  | 133 |       |
| Total   | 279 |       |

#### Based on unweighted (raw) sample data.

# Mobile distribution channels: summary of overall results

Institute of Tourism

Page 57

- **Classification**: The proportion of hotels with no mobile distribution strategy is much higher in the 1-3\* hotels than in the 4-5\* segment where only one third of hotels are without mobile distribution.
- *Size*: Hotels with more than 50 rooms have significantly fewer hotels without mobile distribution (<44%) than hotels below 50 rooms (>53%).
- **Customer segment**: The use of mobile apps is significantly higher in hotels focusing on the MICE and business segments.
- **Management type**: Independent hotels have a much higher part of hotels without mobile distribution (58%) than chain hotels (31%) or hotels in cooperation (32%).

### Use of meta-search engines

#### 56. If you have a permanent connection, with which meta-search engine do you link

Based on unweighted (raw) sample data.

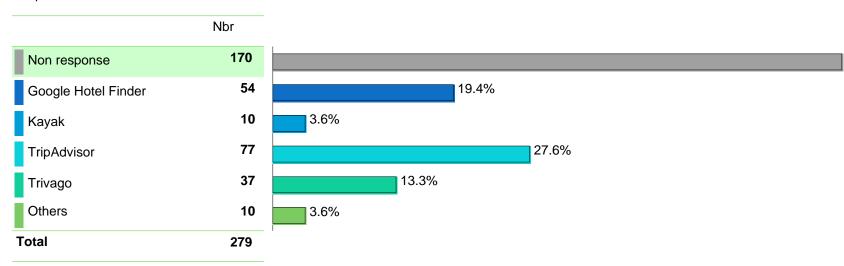

Page 61

## Links to meta-search engines (Swiss sample)

Haute Ecole de Gestion & Tourisme **D** Hochschule für Wirtschaft & Tourismus

### 56. If you have a permanent connection, with which meta-search engine do you link up?

Response rate: 39.1%

Based on unweighted (raw) sample data.

Institute of Tourism Page 62

## Meta-search engines: summary of overall results

- Nearly half of the hotels do not know the integration options with travel meat-search engines whereas one out of five knows it but does not see the business case.
- The number of hotels not knowing meta-search integration is clearly above 50% for 1-3\* hotels whereas with 4\* (39%) and 5\* properties (24%) this proportion is much smaller.
